

Edgemold

Tables • Bases • T-Edge

Take the guesswork out of selecting good looking, long lasting commercial tables!

EDGEMOLD is the BEST CHOICE
NO QUESTION ABOUT IT!

Edgemold offers an extensive assortment of table offerings. Choose among laminates, wood, metal, acrylics, solid surfacing, and custom digital graphics for unprecedented coordination in your environment.

Where tables typically fail is at seams and this often means the table's edge. Food debris, drink spills, impacts from dinnerware, food carts and trays, all take their toll on this critical area and affect the performance and looks of a table. Edgemold solves this problem by use of a one-piece seamless, urethane edge. Their revolutionary injection mold process creates an edge that is not only beautiful to look at, but absorbs impacts and maintains a perfect moisture seal.

**Best Table Top Edge
in the Industry!**

Unless otherwise specified, Edgemold tops are produced with industrial grade #45lb. particleboard. A heavy phenolic backed seal sheet is incorporated backside to ensure stability and prevent warpage.

Glides are an important part of a quality table. Edgemold uses glides that won't catch or snag carpets and which won't leave marks on tile. For textured floors or if tables need to be pushed together, consider self leveling glides which Edgemold also offers.

Edgemold offers several style floor bases. Select from basic 4 prong, circular round, ornate cast offerings, and more available in various heights and finishes.

Edgemold tables continue to look great long after others have been damaged or worn through.

The Edgemold edge is simply stated, "the best table edge in the industry."

Edgemold urethane edges are available in 9 profiles and 46 standard color offerings with custom color matches also available.
